Profile

Full Stack Developer building production applications across mobile, web, backend and infrastructure. Comfortable working independently and taking full ownership of what I build, from the first line of code to deployment. I enjoy learning new technologies and I'm always looking to grow, both technically and as part of a team.

Technical Skills

Languages: TypeScript, JavaScript, Java, SQL

Mobile & Frontend: React Native, Expo, React

Backend: Node.js, Express.js, REST APIs, Spring Boot

Databases: PostgreSQL, MongoDB, Redis, Oracle Database

DevOps & Cloud: Docker, PM2, Nginx, Linux, GitHub Actions, EAS Build, AWS S3, Google Cloud

Other: BullMQ, Stripe, Google Maps, Git, OOP, SOLID, Design Patterns

Professional Experience

Software Developer (Full Stack) May 2024 – Present

Green Rent Iaşi, Romania

Product: Cultiva, an app for monitoring agricultural machinery.

- Took over the app shortly after launch and have been its only developer since, from new features to servers and releases.
- Build and maintain the React Native mobile app, live on Google Play and currently in TestFlight on iOS, and I'm now working on a React web version.
- Work with live GPS and CAN bus data sent by agricultural machinery every 2 seconds, processed and stored by the backend and shown live on Google Maps in the app.
- Integrated Stripe payments, two-factor authentication and other third-party services.
- Split the Node.js backend into separate services running with Docker and PM2, and scaled the busiest one across multiple instances.
- Improved performance with Redis caching, BullMQ background jobs, and better indexing and partitioning in PostgreSQL and MongoDB.
- Manage the Linux VPS with Nginx and SSL, and the CI/CD pipelines (GitHub Actions, EAS Build), and fix production issues on Android and iOS.

Projects

Time and Access Management System (Bachelor's Thesis) github.com/Bordei08/Bachelor_Thesis-RO-

Java, JavaCard, JavaFX, Oracle Database, PL/SQL

- Built a smart card system that handles employee attendance and access control for a company.

Twitter API (FiiPractic 2024) github.com/Bordei08/Twitter-API

Java 17, Spring Boot 3, PostgreSQL

- Built a REST API with Twitter-like features (posts, comments, shares and mentions) during the Java with Spring program organized by Cognizant.

Education

Bachelor's Degree in Computer Science 2020 – 2023

Faculty of Computer Science, Alexandru Ioan Cuza University of Iaşi Final grade: 8.75/10

Languages

Romanian – Native | English – Intermediate (working proficiency)
